### Converting Documents to PDF

- ➔ **Convert any document format into PDF**  
[VB \(.zip\)](#) | [VB.NET \(.zip\)](#) | [ASP](#) | [ASP.NET](#) | [PHP](#) | [Visual C++ \(.zip\)](#) | [Visual C# \(.zip\)](#) | [Java](#) | [ColdFusion](#) | [Python](#)
- ➔ **Convert any document format into PDF**  
[Visual C# \(.zip\)](#)  
The PDF Output is stored in the memory.
- ➔ **Convert any document format into PDF**  
[Visual C# \(.zip\)](#) | [Visual C++ \(.zip\)](#)  
Both the input document and the PDF output are in the memory.
- ➔ **Remotely convert any document format into PDF**  
[ASP](#)  
Conversion happens in a remote server.
- ➔ **Convert any document format into PDF and embed a watermark text**  
[VB.NET](#)
- ➔ **Convert any document format into PDF and ask user where to save the PDF output**  
[VB](#) | [VB.NET](#) | [Visual C#](#)
- ➔ **Convert any document format into PDF and ask user for a custom paper size**

## Convert PDF to Images

---

### ➔ Convert PDF into images

[VB \(.zip\)](#) | [Visual C++ \(.zip\)](#)

This program also demonstrates how to catch events from converter api

## Processing and Manipulating PDF

---

### ➔ An application that demonstrates a wide range of BCL easyPDF SDK processing features ([see screenshot](#))

[VB \(.zip\)](#)

This application demonstrates:

- ➔ PDF merging
- ➔ PDF encryption
- ➔ PDF page rotation
- ➔ PDF optimization
- ➔ PDF hyperlinks
- ➔ PDF attachments
- ➔ PDF signature
- ➔ [See the complete list](#)

### ➔ Merge and rotate PDF pages

[Visual C# \(.zip\)](#)

### ➔ Encrypt existing PDF

[VB.NET \(.zip\)](#)

It allows users to enter all the security settings

### ➔ Add custom comment to existing PDF

[VB.NET](#)

### ➔ Add bookmarks to existing PDF

[VB.NET](#)

### ➔ Extract some pages from a PDF and append them to another PDF

[Visual C#](#)

## Working with PDF Form

---

### ➔ Extract values from existing PDF form

[Visual C++ \(.zip\)](#) | [Visual C# \(.zip\)](#)

### ➔ View and edit PDF form values

[VB \(.zip\)](#) | [Visual C++ \(.zip\)](#)

### ➔ Search and replace existing PDF form values

[VB](#) | [Visual C#](#)

## Building Web and Desktop PDF Applications

---

### ➔ A PDF web-application

[ASP](#)

This web-application will:

- ➔ grab 2 URLs/Web pages,
- ➔ convert them into PDF files,
- ➔ merge the resulted PDFs into a single PDF file,
- ➔ convert the merged PDF file to text file, and
- ➔ provide user with the links to the PDF and text file.

### ➔ A PDF desktop application

[VB \(.zip\)](#) | [Visual C++ \(.zip\)](#)

Create a desktop application that allows user to print to PDF using the "File"->"Print" menu (i.e., opening a document with \ start printing from withing Word).

### ➔ A PDF desktop batch process application

[Visual C++ \(.zip\)](#)

Create PDF batch process application. When the process starts, the application grabs all the files in the specified input folder and converts them into PDF one by one. The converted PDF will be stored in specified output path.

#### ➤ **How to catch event from printer driver**

[Visual C++ \(.zip\)](#)

This is a Visual C++ program that shows how to catch events from printer driver. This program uses PrintJobMonitor to catch printer driver events.

#### ➤ **How to monitor printing activities from the Task Tray**

[Visual C++ \(.zip\)](#)

Create a program that stays in task tray and monitors easyPDF SDK printing activities. A status dialog appears when you start printing and disappears once the printing ends.

#### ➤ **How to handle the PDF printer monitor event**

[Visual C# \(.zip\)](#)

To run this program, you need to run a program that does easyPDF printing.

A printer has 5 status:

- Printer Initialized
- Printer Updated
- Printer Started
- Printing Page
- Printer Ended
